COLLABORATE WITH COLLEAGUES EFFICIENTLY

Wrapsody helps a system integrator quickly create customer proposals.

CHALLENGE

A system integrator creates project proposals for systems customization works delivered to its customers. Six members of a project team typically work on each proposal and need to collaborate on the different versions to produce a final version of proposal.

The project team made a lot of careless errors while sharing the proposals through email or on a file server. There was a lot of confusion and wasted time during the process because someone had to continuously combine different parts of the proposal and keep track of the current version. This made it very difficult to complete the proposals by the targeted deadline. The company tried various online editing solutions to resolve these problems. Unfortunately, even though these solutions support collaboration with synchronized editing, they didn't allow the project team to persistently manage all the documents for a project.

WITH WRAPSODY

After implementing Wrapsody, the project leader created the initial proposal as a Wrapsody document and shared it with the project team. Whenever someone updated the document, it was automatically uploaded to the server and others could obtain the latest version by clicking on their local copy. This dramatically improved the project team's efficiency and productivity by eliminating wasted time and effort.

The automated backup, tagging and advanced search functions of Wrapsody let them easily manage the countless number of documents they use for all their projects. This let them create and share proposals with their customers faster.

IMPROVE PRODUCTIVITY OF YOUR WORK PROCESS

Wrapsody lets a leading global food distributor quickly compile weekly sales results.

CHALLENGE

It was not easy for a global food distributor to gather sales results from offices around the world. At the company's global headquarters, a finance manager was in charge of gathering sales results by email from offices in as many as 20 cities. Every week the staff at these 20 sales offices emailed their weekly report to the finance manager to compile into a consolidated report.

If the sales offices did not send the report on a timely basis, the manager had to send reminders by email or phone to all offices. The company tried to develop a customized web application to simplify the process, but stopped development because of lack of flexibility and the burden of high maintenance costs.

WITH WRAPSODY

The finance manager created a Wrapsody template of the weekly sales report and sent it to each sales office. The offices updated their weekly sales report which was automatically updated on the finance manager's copy. Once finished, he could quickly share the company's global sales progress with upper management. The company also did not have to develop a customized web application since they concluded that Wrapsody was a more flexible and cost-effective solution.

Wrapsody improved everyone's productivity by eliminating weekly emails and phone calls to update sales results and let the sales people focus on selling.

SEARCH FOR DOCUMENTS QUICKLY WITH DIFFERENT APPROACHES

Wrapsody shortens clinical test trials for a leading pharmaceutical company.

CHALLENGE

A leading pharmaceutical company's clinical test group constantly updated and shared clinical test results for new medicines. There were constant problems finding documents containing new medicine development plans, clinical test results, and related activities.

It was especially difficult to find clinical results on digestive medicines as several hundred documents came up in search results from their document management system. The members of this group were frustrated and tired of searching endlessly for documents they needed. To make matters worse, the number of documents on clinical results from various medicines was growing exponentially.

As a result, the company had to deal with a lot of redundant documents because people were copying every version to repositories, and IT had to periodically manage and remove related documents to overcome overwhelming indexing issues.

WITH WRAPSODY

Wrapsody provided several different approaches to help the clinical test group locate documents quickly. Its dynamic tag view, a tile-type interface for tag-based search, allowed them to find documents of clinical results by labeling them with relevant tags, such as development project or medicine names. It was easy to find the targeted tag group and search through a shortened list to find the document they needed.

The test group could also find other detailed clinical results on some medicines through branch maps that visually show the related documents associated with specific medicines. This improved their productivity and allowed them to focus on test results rather than finding documents.

ALWAYS UP-TO-DATE, REGARDLESS OF CHANGES

Wrapsody saves money for a leading manufacturer of forged metal products.

CHALLENGE

One of the world's leading manufacturers of forged metal products for wind energy, chemical and power plant industries, needed to manufacture products that met proper specifications. Sales, product planning, manufacturing and quality assurance managers were all involved in the process to make sure parts were manufactured correctly.

Specifications frequently changed after manufacturing began. Unless everyone received the latest specifications, the company would manufacture the wrong product. Each group wasted a lot of time trying to find the latest specifications and wasted a lot of money remanufacturing the correct part. The company considered using traditional ECMs and cloud-based file sharing systems to provide all departments with the current specifications, but could never keep up with the changes because their local copies were not up to date.

WITH WRAPSODY

After implementing Wrapsody, when a specification changed each department saw the updates immediately in their local copy of the specification document. There was no need to share documents among the departments, since the latest specification changes were always reflected in the shared document.

Since Wrapsody guarantees the latest document version wherever it is, each department saved and used local copies knowing they always had the latest specifications. By having the history of how and when specifications changed, it was easy to review and confirm all updates. The company saved money and time by always manufacturing the correct product.
